

ProEPOS

**Powerful, professional retail
management...**

Still using a cash register? Ever considered that an EPOS system could save you time and money?

Transform your business with a **ProEPOS** EPOS system.

What advantages can an EPOS system bring to your business?

Better stock management (Just In Time replenishment), reduced loss due to wastage, closer control of your margins and a better insight into your customers, are all advantages which a modern EPOS system can bring to your business.

With integration links to all the major wholesalers, our systems offer instant barcode recognition, order transmit and electronic delivery note processing. These key features streamline your business management processes and reduce your admin overhead.

Save time and money, reduce capital tied up in slow moving stock lines or surplus stock and make informed business decisions.

How can an EPOS system affect your bottom line?

Research has shown that the right EPOS system can, on average, add 2-3% to your bottom line profit within the first year alone.

An EPOS system should be seen as an investment - and one with good return.

A simple to use POS terminal

With a clear and uncluttered POS terminal, processing customer transactions through ProEPOS is a breeze for even the most novice staff member...

Clear and easy to read transaction layout showing item description, quantity, unit price and line total.

All transactions are recorded against the individual employee, for full traceability.

SCAN

£12.64

Sell products by scanning, searching or by "hotkey".

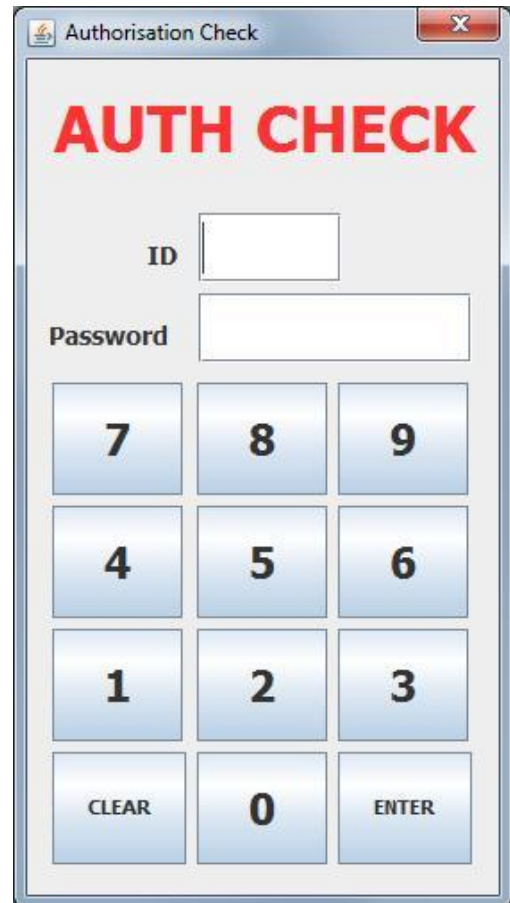

Over 11,000 products are pre-loaded onto all our systems - and with WholesaleLink your product file is kept up-to-date with daily/weekly updates.

Lottery buttons provide for quick and easy sale of lottery tickets and pay-out of wins.

Manager level functions include the ability to apply discounts, return and void sales and set aside visits.

Petty cash disbursements from the cash drawer can be recorded for accounting purposes and the standard cash register XREAD and ZREAD functions are only a tap away.

For accountability and traceability purposes, all users have an individual ID and password to access the system. With the ability to set access rights to each facility of the software, you stay in full control of exactly who has access to which functions.

In addition to these security measures, CCTV overlay allows video footage of the counter/check-out area to display EPOS transaction data on top of the video image. This helps to deter and identify staff theft.

In addition to security worries, shop keepers also have to consider their legal obligations with regards to alcohol and tobacco sales.

Through an electronic refusal log maintained by the system, staff are prompted to confirm the age of the customer when restricted items are sold.

Combined with the CCTV overlay functionality, it becomes even easier for you to prove "due diligence" should the worst happen.

Comprehensive product file

With over 11,000 products pre-loaded "from the box", a ProEPOS system is ready-to-run as soon as you connect the power. Of course from time-to-time you will need to amend pricing, add supplementary stock lines and print off shelf edge labels. But don't worry - our back office interface is one of the simplest to use...

Orders can be compiled:

- using preset re-order levels and "ideal quantities",
- by handheld terminal,
- through system generated "suggested" order quantities based on recent sales performance.

From-the-box the system starts to identify fast moving and slow moving lines and orders product accordingly, without any effort required on your part.

Of course any orders generated by the system are fully editable; despite the automation you stay in full control of your ordering commitments.

With WholesaleLink, orders can be uploaded directly to your wholesaler for delivery. On delivery of the goods, an electronic delivery note is downloaded and your stock levels automatically adjusted (taking into account any substitutions or unavailable items).

With ProEPOS, back-office admin is practically a thing of the past!

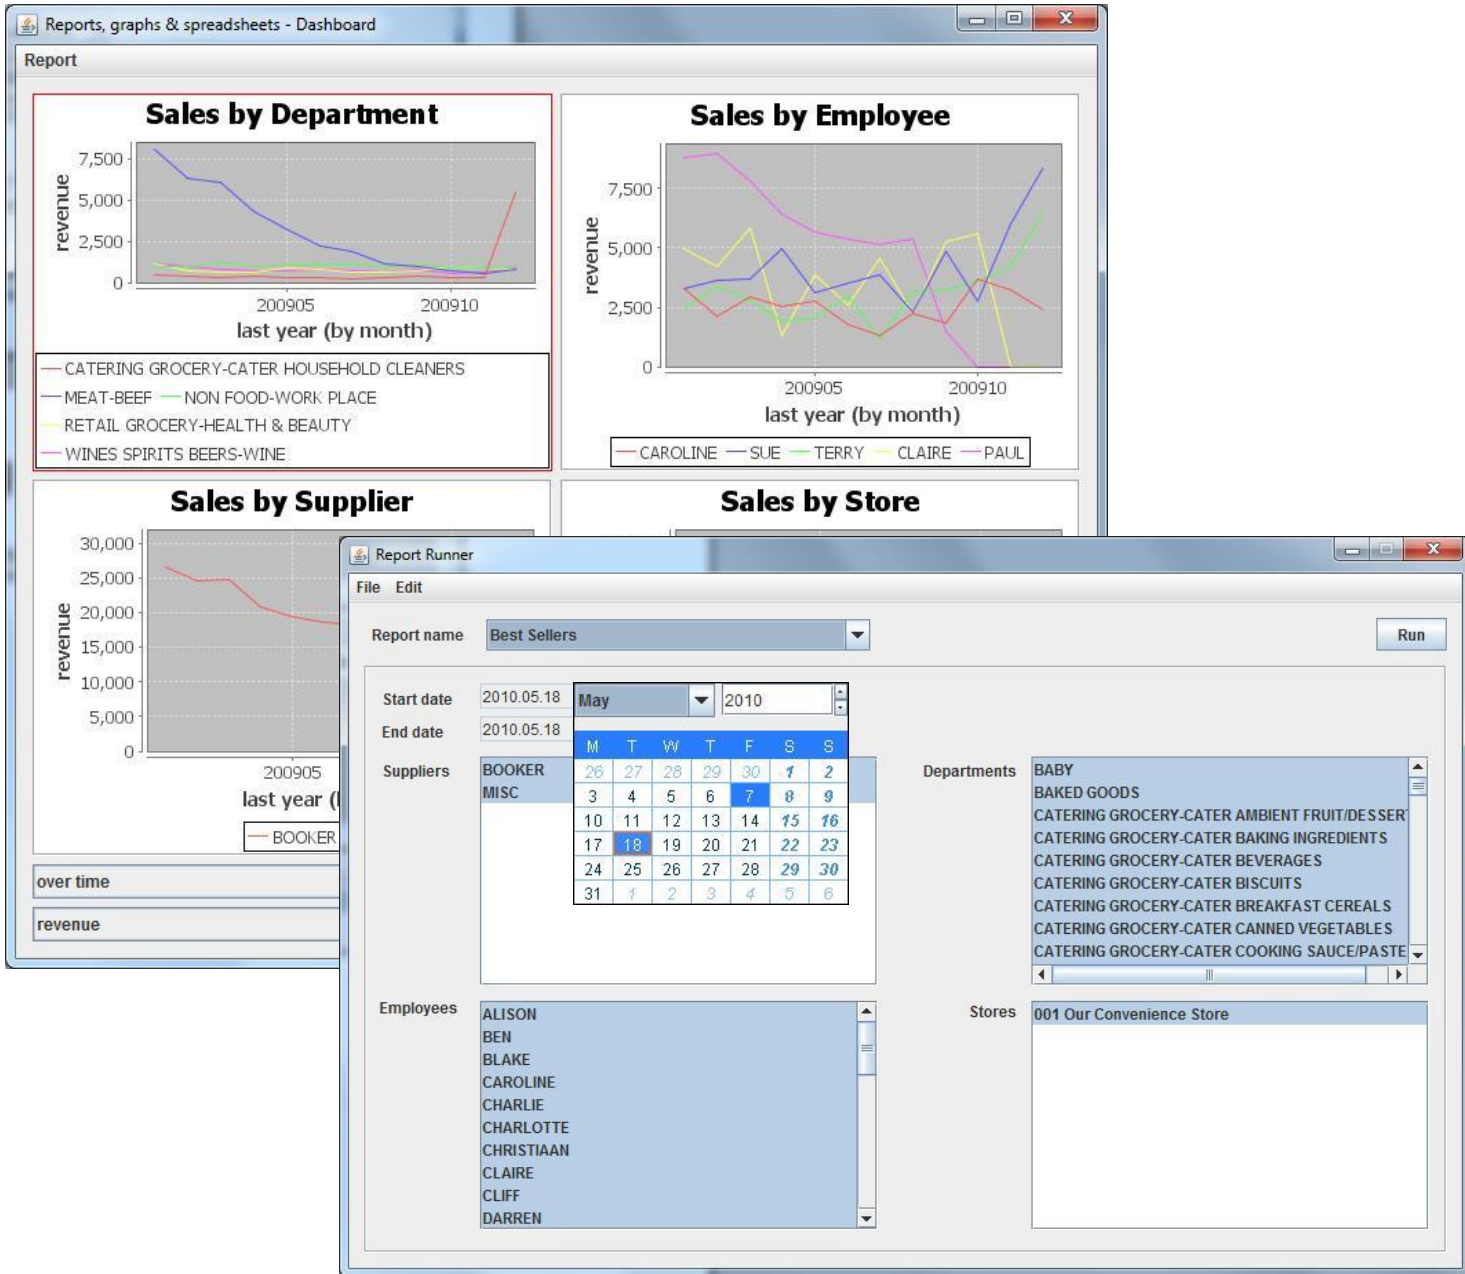

M	T	W	T	F	S	S
29	30	31	1	2	3	4
5	6	7	8	9	10	11
12	13	14	15	16	17	18
19	20	21	22	23	24	25
26	27	28	29	30	1	2
3	4	5	6	7	8	9

Supporting "real-time" handheld technology, stock checking and ordering can be performed from the palm of your hand and while the store is open and trading.

Utilising our easy-to-use PDTwizd software, simply point and scan to check/adjust a stock level or add a product to a purchase order.

Informative reporting

In retail, data is the key to making informed business decisions. Having access to basic figures and information is just as important as being able to drill down to the detail. ProEPOS provides a powerful, query driven reporting engine, complete with dashboarding, which is capable of satisfying the needs of the most demanding business owner...

Standard sales reports provide analysis by supplier and department, right down to individual stock line. A Best Sellers report helps you quickly identify fast moving stock lines.

All data is held indefinitely, without the need to archive or flush transactions over a certain age. With access to historical data going back to when the system was deployed, comparative analysis is always available at the touch of a button.

With remote access functionality, reports can also be run away from the store (eg. on a home PC or laptop) without interfering with store operations.

Wherever you are, you are never far from keeping your finger on the pulse.

“Just a quick email to congratulate you on a very useful and intuitive system. It's incredibly rare for me to find something which works so well straight out of the box”

... one of our many satisfied customers
